1. What is a merge conflict in Git? and How do you resolve a merge conflict?

Answer: A merge conflict is an event that takes place when Git is unable to resolve differences in code between the two commits automatically.

Git is able to automatically merge the changes only if the commits are on different lines or branches.

To resolve a merge conflict in Git, follow these steps:

- The most simple way to resolve the conflicted file is to open it and make the required changes
- After editing the file, we can use the git add a command to stage the new merged content
- The final step is to create a new commit with the help of the git commit command

• Git will create a new merge commit to finalize the merge

2. What are some of the key new features in HTML5?

Answer: Key new features of HTML5 include:

- Improved support for embedding graphics, audio, and video content via the new < canvas >, < audio >, < video > tags.
- Extensions to the JavaScript API such as geolocation and drag-and-drop as well for storage and caching.
- Introduction of "web workers".
- Several new semantic tags were also added to complement the structural logic of modern web applications. These include the < main >, < nav >, < article >, < section >, < header >, < footer >, and < aside > tags.
- New form controls, such as < calendar >, < date >, < time >, < email >, < url >, < search >
